1 CHAPTER III, EXAMPLE III, Q.2

In what ratio is the join of $\begin{pmatrix} 2 \\ 3 \end{pmatrix}$ and $\begin{pmatrix} 3 \\ 4 \end{pmatrix}$ is divided by the join of $\begin{pmatrix} 3 \\ 3 \end{pmatrix}$ and $\begin{pmatrix} 5 \\ -2 \end{pmatrix}$

ratio, r by which the intersection divides the line joining points \mathbf{A} & \mathbf{B} is given as

$$r = \frac{\|\mathbf{B} - \mathbf{X}\|}{\|\mathbf{A} - \mathbf{X}\|} \quad (1.1.11)$$

$$r = \frac{\left\| \begin{pmatrix} 3 \\ 4 \end{pmatrix} - \begin{pmatrix} \frac{19}{7} \\ \frac{26}{7} \end{pmatrix} \right\|}{\left\| \begin{pmatrix} 2 \\ 3 \end{pmatrix} - \begin{pmatrix} \frac{19}{7} \\ \frac{26}{7} \end{pmatrix} \right\|} \quad (1.1.12)$$

$$r = \frac{2}{5} \quad (1.1.13)$$

1.1 Solution

Let the given points be

$$\mathbf{A} = \begin{pmatrix} 2 \\ 3 \end{pmatrix}; \mathbf{B} = \begin{pmatrix} 3 \\ 4 \end{pmatrix}; \mathbf{C} = \begin{pmatrix} 3 \\ 3 \end{pmatrix}; \mathbf{D} = \begin{pmatrix} 5 \\ -2 \end{pmatrix} \quad (1.1.1)$$

Let \mathbf{X} be the point of intersection of lines joining \mathbf{A}, \mathbf{B} & \mathbf{C}, \mathbf{D} . From the definition of the slopes,

$$\mathbf{B} - \mathbf{X} = k_1(\mathbf{B} - \mathbf{A}) \quad (1.1.2)$$

$$\mathbf{D} - \mathbf{X} = k_2(\mathbf{D} - \mathbf{C}) \quad (1.1.3)$$

Subtracting (1.1.3) from (1.1.2), we get

$$\mathbf{B} - \mathbf{D} = k_1(\mathbf{B} - \mathbf{A}) - k_2(\mathbf{D} - \mathbf{C}) \quad (1.1.4)$$

Substituting (1.1.1) in (1.1.4)

$$\begin{pmatrix} -2 \\ 6 \end{pmatrix} = k_1 \begin{pmatrix} 1 \\ 1 \end{pmatrix} - k_2 \begin{pmatrix} 2 \\ -5 \end{pmatrix} \quad (1.1.5)$$

$$\begin{pmatrix} 1 & -2 \\ 1 & 5 \end{pmatrix} \begin{pmatrix} k_1 \\ k_2 \end{pmatrix} = \begin{pmatrix} -2 \\ 6 \end{pmatrix} \quad (1.1.6)$$

$$\begin{pmatrix} k_1 \\ k_2 \end{pmatrix} = \begin{pmatrix} 1 & -2 \\ 1 & 5 \end{pmatrix}^{-1} \begin{pmatrix} -2 \\ 6 \end{pmatrix} \quad (1.1.7)$$

$$\begin{pmatrix} k_1 \\ k_2 \end{pmatrix} = \begin{pmatrix} \frac{2}{7} \\ \frac{8}{7} \end{pmatrix} \quad (1.1.8)$$

Substituting (1.1.8) in (1.1.2),

$$\begin{pmatrix} 3 \\ 4 \end{pmatrix} - \mathbf{X} = \frac{2}{7} \begin{pmatrix} 3 \\ 4 \end{pmatrix} - \frac{2}{7} \begin{pmatrix} 2 \\ 3 \end{pmatrix} \quad (1.1.9)$$

$$\mathbf{X} = \begin{pmatrix} \frac{19}{7} \\ \frac{26}{7} \end{pmatrix} \quad (1.1.10)$$
